

Label Material 7815

Thermal Transfer Polyester Label Material

Product Data Sheet

Updated : April 2000
Supersedes : March 1999

Physical Properties
Not for specification purposes
(Calipers are nominal values)

Facestock	58 micron (2.3 thou) Matte Radiant White polyester
Adhesive	28 micron (1.1 thou) #310 Acrylic
Liner	81 micron (3.2 thou), 90 g/m ² (#55) Densified kraft
Shelf Life	24 months from date of manufacture of product when properly stored between 22°C and 50% relative humidity.

Features:

- Matte topcoat provides the advantages of matte coating combined with a surface that is smooth enough for thermal transfer printing. Resin ribbons are recommended for optimum durability. The matte coating resists degradation from scuffing, chemicals, moisture, and wide temperature fluctuations. The topcoat also provides improved ink anchorage for traditional forms of press printing.
- #310 adhesive is a firm adhesive which resists oozing and provides high strength on a variety of surfaces including high surface energy (HSE) plastics and metals.
- 90 g/m² densified kraft liner assures consistent die cutting.
- 3M™ Label Material 7815 is UL recognised (File MH16411) and CSA accepted (File 99316). See the UL and CSA listings for details.

Application Ideas:

- Barcode labels and rating plates.
- Property identification and asset labelling.
- Warning, instruction, and service labels for durable goods.
- Nameplates for durable goods.

Liner Release	180° Removal of Liner from Facestock		
	Rate of Removal	N/10mm	Gms/25mm Width
	2.3 m / min	0.042	11
	7.6 m / min	0.042	11

Environmental Performance	The properties defined are based on four hour immersions at room temperature 22°C unless otherwise noted. Samples were applied to stainless steel panels 24 hours prior to immersion and were evaluated one hour after removal from the solution for peel adhesion. Adhesion measured at 180° peel angle (ASTM D3330) at 305 mm/min.			
Chemical Resistance	Adhesion to Stainless Steel		Appearance	Edge Penetration
Chemical	N/10mm	Oz/in	Visual	Millimetres
Isopropyl Alcohol	5.9	54	No change	1
Detergent (1% Alconox®*)	7.2	66	No change	0
Engine Oil (10W30) @ 250°F (121°C)	7.7	70	No change	1.5
Water for 48 hours	7.9	72	No change	0
pH 4	7.7	70	No change	0
PH10	7.2	66	No change	0
409®* Cleaning solution	7.1	65	No change	0

 Label Material

Processing

Printing:

Facestock is topcoated for improved ink receptivity and is designed for thermal transfer printing. It is printable by all standard roll processing methods including flexography, hot stamp, letterpress, and screen printing.

Die Cutting:

Rotary die cutting is recommended. Fanfolding of labels is not recommended. Small labels should be evaluated carefully. Winding tensions should be kept at a minimum to help prevent the adhesive from oozing.

Packaging:

Finished labels should be stored in plastic bags.

Special Considerations

For maximum bond strength, the surface should be clean and dry. Typical cleaning solvents are heptane and isopropyl alcohol.

NOTE: When using solvents, read and follow the manufacturer's precautions and directions for use.

For best bonding conditions, application surface should be at room temperature or higher. Low temperature surfaces, below 10°C can cause the adhesive to become so firm that it will not develop maximum contact with the substrate. Higher initial bonds can be achieved through increased rubdown pressure.
